# AUTOMATED PATCH + COMPLIANCE MANAGEMENT

Experteq's solution utilises a single strategy to manage and monitor security patching and compliance for all IT systems hosted anywhere.

One of the most tedious but critical responsibilities of any IT department is maintaining security patching and compliance across the entire infrastructure.

This not only involves the tasks of assessing, planning and deploying updates, critical security patches and revised Operating System components but also ensuring these updates have deployed successfully and that none have been missed.

The key to simplifying this function is to automate as much of the process as possible. However, traditional offerings in this space tend to be inflexible with regards to cross-platform coverage, deployment scheduling and reporting. This often results in multiple products with each requiring upskilling and separate license costs, making the whole exercise very expensive to support.

## Typical Problems:

- ◆ Incomplete testing
- ◆ No roll back
- ◆ Inconvenient Outages
- ◆ Human error
- ◆ Poor visibility of errors

## Business Risks & Challenges:

- ◆ Security holes
- ◆ Outages to business
- ◆ Limited accountability
- ◆ Stressed/overwork staff
- ◆ Tedious tasks
- ◆ Limited Compliance - higher risk/cost

After commissioning our service, the IT admin staff at a large University in NSW reported:

“Patching used to take 3 of us, 2 days per month including very long nights onsite. Now we sit at home with an iPad just to keep an eye on the automated process.”

The CIO of a charity in NSW reported:

“I have the dashboard running on a TV above my desk for everyone to see. I no longer have to stress about security patching compliance and my team can focus their time on supporting our staff rather than dealing with patching.”

Experteq’s Automated Patching and Compliance service is your one stop solution to manage and monitor security patching and compliance for all IT systems hosted anywhere, including both Cloud and On-Premises, with key features including:

- ◆ Accessible from Anywhere, Anytime from any Device
- ◆ Automated Security Vulnerability Assessment and Scoring
- ◆ Live Reporting Dashboards
- ◆ Advanced Runbook Automation and Scheduling
- ◆ Automated App Validation after Updating (Synthetic Monitoring)
- ◆ Comprehensive Monitoring including Automated Recovery of Processes and Services
- ◆ Reduce Operating Overheads and Improve IT Department Efficiency
